

agentic-ai-azure-week12-capstone

Week 12 - Capstone: Build, Demo & Review

Agentic AI on Azure - Enterprise Master Class | Handout (slides + notes)

Notes

Welcome. This deck covers 'agentic-ai-azure-week12-capstone' - Week 12 - Capstone: Build, Demo & Review. Frame the problem and why it matters, then walk the class through the learning goal, the enterprise use case, the architecture/flow, the key concepts, a live run in VS Code, and the architect's takeaways. The repo runs locally with no Azure, so demo it live.

Slide 2 - Learning goal

- Ship a production-shaped multi-agent app
- Compose patterns from across the course
- Defend your design

Notes

[Learning goal] Walk through these talking points:

- Ship a production-shaped multi-agent app
- Compose patterns from across the course
- Defend your design

Ask the class: which of these ideas is new to you?

Slide 3 - Enterprise use case

- Customer Onboarding Automation
- Intake -> KYC -> Risk -> Provisioning
- One decision: onboarded / needs_review / rejected

Notes

[Enterprise use case] Walk through these talking points:

- Customer Onboarding Automation
- Intake -> KYC -> Risk -> Provisioning
- One decision: onboarded / needs_review / rejected

Tip: relate this to a regulated scenario your students know.

Slide 4 - Architecture / flow

- Staged multi-agent pipeline
- KYC screening guardrail (sanction/watchlist)
- Risk flags high-value cases for review
- Provisioning only when cleared

Notes

[Architecture / flow] Walk through these talking points:

- Staged multi-agent pipeline
- KYC screening guardrail (sanction/watchlist)
- Risk flags high-value cases for review
- Provisioning only when cleared

Demo: trace a single request through these steps live.

Slide 5 - Key concepts

- Reuses Wk1-2 intake, Wk6-7 agents, Wk5 tools
- Other scenarios: compliance, lead scoring, doc-gen
- Add RAG, identity, observability to extend

Notes

[Key concepts] Walk through these talking points:

- Reuses Wk1-2 intake, Wk6-7 agents, Wk5 tools
- Other scenarios: compliance, lead scoring, doc-gen
- Add RAG, identity, observability to extend

Open the named file in the repo while you explain each point.

Slide 6 - Run it (VS Code - no Azure needed)

- git clone the repo, then open it in VS Code
- python -m venv .venv -> activate it
- pip install -r requirements.txt
- uvicorn app.main:app --reload
- Open /docs and call POST /api/v1/capstone
- Runs in MOCK mode - no Azure/keys needed

Notes

[Run it (VS Code - no Azure needed)] Walk through these talking points:

- git clone the repo, then open it in VS Code
- python -m venv .venv -> activate it
- pip install -r requirements.txt
- uvicorn app.main:app --reload
- Open /docs and call POST /api/v1/capstone
- Runs in MOCK mode - no Azure/keys needed

Pause for questions before moving on.

Slide 7 - Architect's takeaways

- Defend: pattern choice, deploy target, cost, security
- Day-2 operations matter as much as build
- End-to-end is the real skill

Notes

[Architect's takeaways] Walk through these talking points:

- Defend: pattern choice, deploy target, cost, security
- Day-2 operations matter as much as build
- End-to-end is the real skill

Discussion: when would you NOT choose this approach?
